New Year's Day

The TRX Cymbal Co. was founded nearly 20 years ago with the goal of combining the long-established traditions of cymbal making with progressive, new designs. Our mission was create a range of studio-quality, "Custom-Classic" cymbals that would better meet the needs of modern drummers and the music they play. This catalog features the results of those efforts along with the full range of TRX Cymbals... and many of the drummers who play them.

The history of cymbals begins about 5,000 years ago in Mesopotamia (aka The Cradle of Civilization) when ancient metallurgists discovered that they could make their tools and weapons stronger by combining copper with a little tin. They called their new alloy "Bronze" and it was an instant success— so much so that the period became known as the Bronze Age.

Bronze was initially used for military and religious purposes but gradually found its way into musical instruments such as bells and cymbals. Centuries later, cymbals made from Bronze grew increasingly popular and important in secular music as civilization and culture evolved during the Classical music era (1700 to 1850 AD).

By the late 1800's, as new forms of popular music and the modern drumset took shape, cymbals began to take on the main time-keeping role. Bronze cymbals have become the standard of sound and performance for virtually every new style of music ever since.

Today, cymbals made from the highest quality, B20 Bronze (80% copper and 20% tin) and perfected by generations of cymbalsmiths are overwhelmingly

preferred by the world's leading drummers and percussionists.\* This time-tested formula of mixing, casting, tempering and handcrafting is used exclusively for the production of TRX and TRX Special Edition cymbals.

In addition to embracing the cymbal-making methods and materials that set the standard for centuries, TRX is equally committed to creating cymbal innovations that are setting new standards. These include:

- Applying the versatility and blendability of B20 Bronze to expand the tonal spectrum as well as the quality, quantity and diversity of cymbal sounds.
- Introducing the High Contrast™ concept and moving away from the conventional

method of selecting a cymbal set-up of similar sounding cymbals to a more advanced, "mix-and-match" system of choosing different sounding cymbals based on their contrasting tonal qualities and musical relevance in multiple genres.

- Developing progressive, new cymbal designs such as cross-matched hi-hats, asymmetrically-vented crashes and removable rivets as well as easily stackable cymbal types and more.

# CUSTOM CLASSIC

# TRXCUSTOM

The fundamental characteristics of a cymbal's sound and performance (pitch, power, tone quality, articulation, sustain, durability, etc.) are primarily determined by its size and weight. Information on how these and other essential factors can be modified to influence a cymbal's performance and affect its sound is detailed in the guide to cymbal design, below.

In addition to offering a wide range of cymbal types, sizes, series and sounds, TRX understands that finding the right cymbal for the music you play can sometimes require a more individual, more personalized approach. For these situations, the TRX Custom shop offers the opportunity for drummers to design their own cymbals and have them custom-crafted by our master cymbalsmiths.

### THE ELEMENTS OF CYMBAL DESIGN

<b>SIZE</b>		<b>WEIGHT</b>	
smaller	larger	thinner	thicker
higher pitch	lower pitch	lower pitch darker tone more sustain less durability	higher pitch brighter tone more articulation more durability
<b>BELL</b>		<b>LATHING</b>	
smaller	larger	unlathed	lathed
wetter/more overtones	drier/less overtones	more complex	more focused
<b>HAMMERING</b>		<b>FINISH</b>	
regular	deep	natural	brilliant
darker	drier/trashier	darker/drier	brighter/wetter
		<b>EFFECTS</b>	
		venting	rivets
		trashy/shorter decay	sizzle/longer decay

Visit the TRX Custom Shop to create your ultimate cymbal.

\*Other Bronze formulations are used for gongs (B24), semi-pro cymbals (B18, B12, B10) and student-model cymbals (B8).

# CLS Series

NEW!

# XX Series

Designed to recreate the classic cymbal sounds from the 1950s and 60s that remain popular with today's young drummers, CLS Series cymbals combine ultra-light weights, traditional lathing and hammering and an exclusive "Retro-Gray" finish. Unlike most modern Hi-Hats, CLS top and bottom Hi-Hat cymbals are the same weight for a more vintage sound. CLS cymbals come pre-drilled to accept our optional, removable rivets.

The new XX Series are extra-thin cymbals with micro-lathing and a combination of standard, deep and extra-deep hammering. Dark, trashy and controlled yet extremely versatile, the 20", 21" and 22" Crash-Ride models can effectively be used as Crashes, Rides, Crash-Rides and Effects cymbals in both traditional and contemporary playing situations. Also available in 14" and 15" Hi-Hats.

# DRK Series

# NDK Series

**T**hin and cast from our versatile B20 Bronze, the TRX DRK Series is known for its dark, warm, earthy sound. Along with a balanced blend of depth, dryness and definition, the line's tonal tendencies are further enhanced by a distinctive, low-profile design, natural (unlathed) finish and hand-hammering. This TRX original is available in a wide range of sizes and models.

**T**he NDK (aka "New DRK") Series features extra-thin castings and traditional hammering along with an unlathed, sandblasted playing surface and a lathed underside. The result is a warm, dark, dry tone that is appropriate in a wide range of musical situations. NDK Hi-Hats, Crashes and Crash-Rides come standard with 3 sets of holes that accommodate our optional, removable rivets.

# X Series

# MDM Series

The X Series was originally developed to celebrate our 10th Anniversary in 2016. It has gone on to become one of our most popular lines. Based on the design of the original MDM Series, its lighter weight and large, extra-deep hammering gives the X Series a darker, trashier, more exotic sound— adding a distinctive new voice to the high-contrast spectrum.

Medium-weight with traditional lathing and hammering, the TRX MDM Series is an all-purpose line developed to meet a diversity of modern and classic musical needs. MDM cymbals provide exceptional sound and performance in a variety of drumming applications— bringing the quality, consistency, individuality and personality of handcrafted cymbals to today's drummers.

# SFX Series

The SFX Series is a collection of innovative cymbals and sounds. Based on the realization that, like Stacks, Hi-Hats combine 2 cymbals to create a specific sound, our experimentation with different cymbal combinations resulted in the DRK/BRT, DRK/X and STORM "cross-matched" Hi-Hats. The SFX Series also includes Thunder Slap and Thunder Clap Stacks (DRK Thunder, BRT and DRK plates), Storm Hi-Hats (Thunder & Lightning) and heavy T-Bells.

To create the unique, extra-trashy tonal character of our TRX Thunder and Lightning cymbals we started with DRK and BRT Series splashes, crashes and chinas and then applied an asymmetric pattern of vents. The cymbals can be used individually or stacked above and below other cymbal sizes and types.

A relatively recent development, Stacks are 2 or more cymbals that are placed on top of each other to create a shorter, more extreme, more aggressive sound. Stacks generally fall into two categories:

1. "Crunch" (short decay) — A Splash, Crash or Vented cymbal on a China cymbal.
2. "Sizzle" (medium decay) — A Splash, Crash or Vented cymbal on a Splash, Crash or Vented cymbal.

Stack cymbals can be the same size or different sizes as long as the entire edge of the top cymbal makes contact with surface of the bottom cymbal. All other factors being equal, a smaller Stack will be higher in pitch than a larger one.

# Blends Series

# ALT Series

**B**lends Series cymbals combine elements of the MDM and BRT lines to add another tonal step in the sonic spectrum. The lathed outer area combined with a polished, unlathed center section creates a range of "hybrid" cymbals with a balance of warmth and brightness along with a sweet sound that blends well with other cymbals in both conventional and mix-and-match set-ups.

**I**ncorporating heavier castings, a raw bell and a micro-lathed playing surface with multi-level hammering, TRX ALT Series cymbals are designed to offer an alternative for more aggressive mainstream and modern styles. They are stronger, brighter and more responsive than traditional general purpose cymbals— setting a new standard for all-around sound and performance.

# LTD Series

# ICE Series

The LTD Series is another TRX exclusive. Based on the ALT Series, the hybrid-design of LTD cymbals adds a highly-polished outer edge for a bit more brightness and projection. Available in a limited selection of Chinas and Hi-Hats as well as 18" to 23" Crash-Rides that provide a smooth, rich tone that is highly recommended for playing situations where sustained wash-ride time-keeping is appropriate.

Offering our widest selection of types and sizes, ICE Series cymbals are medium-heavy with micro-lathing, multi-level hammering and a brilliant, Diamond™ finish. They are known for their bright, powerful, crystal clear tone and are recommended for many musical styles, from Gospel/R&B, Pop and Rock to Latin and Metal. Now also available in a range of MegaBell and Flat-Ride models.
